cript 1: Normal patient conversation

ASHA Worker: Namaste, aapka naam kya hai?

Patient: Mera naam Sunita hai.

ASHA Worker: Aapki umar kitni hai?

Patient: Main 28 saal ki hoon.

ASHA Worker: Aapko kya pareshani hai?

Patient: Mujhe do din se bukhar aur thakaan ho rahi hai.

ASHA Worker: Kya aapne koi dawa li hai?

Patient: Nahi, maine abhi koi dawa nahi li hai.

Expected result:

- Name: Sunita
- Age: 28
- Symptoms: Fever and fatigue
- Duration: 2 days
- Medicine: No medicine taken, according to the patient

How to test: Check whether all five details appear in the correct form fields.

Script 2: Missing patient information

ASHA Worker: Aapka naam aur umar kya hai?

Patient: Naam abhi rehne dijiye. Meri umar bhi form mein baad mein bataungi.

ASHA Worker: Aapko kya dikkat hai?

Patient: Mujhe teen din se khaansi aur gale mein dard hai.

ASHA Worker: Koi dawa le rahe hain?

Patient: Nahi.

Expected result:

- Name: Missing
- Age: Missing
- Symptoms: Cough and sore throat
- Duration: 3 days
- Medicine: No medicine taken, according to the patient

How to test: Check that missing name and age are highlighted for review instead of being guessed by the AI.

Script 3: Medicine name not remembered

ASHA Worker: Aapka naam kya hai?

Patient: Mera naam Rani hai, meri umar 35 saal hai.

ASHA Worker: Kya aap koi dawa le rahi hain?

Patient: Haan, main roz subah ek dawa leti hoon, lekin uska naam yaad nahi hai.

ASHA Worker: Kya aapko koi aur dikkat hai?

Patient: Mujhe kabhi-kabhi chakkar aate hain.

Expected result:

- Name: Rani
- Age: 35
- Medicine: One medicine taken every morning
- Medicine name: Unknown
- Symptoms: Occasional dizziness

How to test: Verify that the AI doesn't invent a medicine name and marks the unknown information clearly.

Script 4: Unclear or contradictory information

ASHA Worker: Aapki umar kitni hai?

Patient: Meri umar 25 saal hai.

ASHA Worker: Aapne pehle apni umar 30 saal batayi thi. Sahi umar kya hai?

Patient: Mujhe exact yaad nahi hai, aap ise confirm karne ke liye mark kar dijiye.

ASHA Worker: Aapko kya pareshani hai?

Patient: Mujhe pet mein dard ho raha hai.

Expected result:

- Age: Unconfirmed; conflicting answers
- Symptoms: Abdominal pain
- Review required: Age needs confirmation

How to test: Check whether the app highlights the conflicting ages rather than silently choosing 25 or 30.

Script 5: Pregnancy-related information

ASHA Worker: Aapka naam aur umar kya hai?

Patient: Mera naam Kavita hai aur meri umar 24 saal hai.

ASHA Worker: Kya aap pregnant hain?

Patient: Haan, main pregnant hoon.

ASHA Worker: Pregnancy ko kitne mahine hue hain?

Patient: Mujhe exact yaad nahi hai.

ASHA Worker: Aapki agli check-up ki date kya hai?

Patient: Abhi date confirm nahi hui hai.

Expected result:

- Name: Kavita
- Age: 24
- Pregnancy status: Patient reports being pregnant
- Pregnancy duration: Unknown
- Next check-up date: Not confirmed

How to test: Check that the relevant information is extracted and missing pregnancy details are highlighted, not invented.

Script 6: Potential danger signs

ASHA Worker: Aapka naam kya hai aur aapko kya dikkat hai?

Patient: Mera naam Ramesh hai. Mujhe saans lene mein bahut dikkat ho rahi hai.

ASHA Worker: Yeh kab se ho raha hai?

Patient: Aaj subah se aur abhi bhi dikkat hai.

ASHA Worker: Kya seene mein bhi dard hai?

Patient: Haan, seene mein bhi dard ho raha hai.

Expected result:

- Name: Ramesh
- Symptoms: Severe breathing difficulty and chest pain
- Duration: Since this morning; ongoing
- Alert: Potential urgent danger sign requiring immediate human review

How to test: Verify that the safety alert appears, the symptoms are preserved, and the app does not claim to diagnose a disease.

Script 7: Patient corrects an earlier answer

ASHA Worker: Aapka naam kya hai?

Patient: Mera naam Mohan hai.

ASHA Worker: Aapki umar kitni hai?

Patient: 42 saal.

ASHA Worker: Kya aapko koi pareshani hai?

Patient: Mujhe paanch din se khaansi hai.

ASHA Worker: Aapne abhi 42 saal bataya, lekin kya aap apni umar dobara confirm kar sakte hain?

Patient: Maaf kijiye, meri umar 40 saal hai, 42 nahi.

Expected result:

- Name: Mohan
- Age: 40, corrected by the patient
- Symptoms: Cough
- Duration: 5 days

How to test: Check whether the final form reflects the corrected age and doesn't retain 42 as the confirmed value.
